DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I, Species A (claims 1-4) in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Kobayashi et al. (US 6,214,458 B1).

Kobayashi discloses an image recording sheet comprising a transparent support, a transparent image receiving layer on one side of the support, and a white coated layer on the other side of the support, wherein an image may be provided on the image receiving layer by electrophotography recording (abstract). The white coated layer is equivalent to the claimed glossiness controlling layer. The white coated layer comprises a binder and filler.

Allowable Subject Matter

4. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Kobayashi neither teaches nor suggest mechanical treatment of the backside surface of the substrate so as to control the glossiness of the image recording layer.

Conclusion
